amplification or immuno assays), particularly for diagnosis of digestive, non-immune defensive, endocrine or immune system disorders. A particular application is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hSSP. The protein is also useful as antifungal, antibacterial, antiparasitic and antiviral agents and may be expressed in vivo from the DNA. The protein, or cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expressing it, are used in screening tests to identify specific (ant)agonists, e.g. antibodies (Ab), polypeptides and antisense nucleic acids, which are potentially useful for treating conditions associated with excessive hPSP production. Cells containing the DNA are used to express the recombinant protein and this can be used to raise Ab, useful for diagnosis, therapy, for affinity purification and to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention. The hPSP DNA is useful for chromosome identification and isolation of the corresponding genomic DNA. The DNA and protein can be used to detect abnormal levels of hPSP (in standard blotting,

Human parotid secretory protein (MPSP).

18-SEP-1998 (first entry)

```
screen for its antagonists. Antibodies are useful directly as antagonists, to transport drugs to HPSP-expressing cells, to detect cells that express HPSP, to monitor patients being treated with HPSP, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to detect HPSP-encoding sequences (optionally after amplification by PCR) by hybridisation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                           This represents a human parotid secretory protein (HPSP). Antagonists that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or gastrointestinal tissue, e.g. cancer of salivary gland, thyroid, prostate, breast, gastrointestinal tract or pancreas, Sjorgen's syndrome, Graves disease, thyroiditis, insulin-dependent diabetes, pancreatitis, ulcerative colitis, Crohn's disease and atrophic gastritis. Host cells containing expression vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       purification of HPSP from natural sources. Expression of HPSP may indicate cell proliferation. HPSP nucleic acid or its fragments are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 LGVLQKSSAWQLAKQKAQEAEKLLNNVISKLLPTNTUFFGLKISNSLILDVKAEPIDDGK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a human secreted protein amino acid sequence. The invention relates to sequences AAA87725-A87774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides. Included in the invention are a host cell containing one of the CDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      storing the sequence data on a computer system, and a method for identifying features of the CDNA sequences using a computer programme. The CDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted

The proteins and polymucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, theumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    central nervous system; Virucide; anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; antiagregant; haemostatic; vulnerary; antiulier; osteopathic; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens. Human brain expressed single exon probe encoded protein SEQ ID NO: 34413.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; brain expressed exon; gene expression analysis; probe; microarray; Alzhelmer's disease; multiple sclerosis; schizophrenia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .;

                                                                                                             probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and dissplaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #9264 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The patent discloses novel polynucleotides and their corresponding proteins which play a major role in induction of growth, cell indiration of and proliferation. Cell-cell interaction and the differentiation of the differentiation of the discussion of the maintenance of tissue-specific cell-cell interaction and the maintenance of tissue integrity and thus are important in wound healing. They are useful in various assays to determine the biological activity, to raise attibodies, to isolate corresponding interacting proteins or other compounds, and as therapeutic target in a whole range of disease states. Compositions comprising the novel proteins of the invention are useful for treating mammalian disorders. Polynucleotides of the invention are useful in genome and physical mapping, in positional cloning of genes, to tag or identify an organism or its reproductive material (as non-disruptive tags for marking organisms), and for the diagnosis and treatment of mammalian diseases which is the consequence of inappropriate expression of kinase genes. They are useful for promoting immune response the analysis of are useful for promoting immune response
                                                                                                                                                                                                                                                                                                                                                                                           Mouse, cytostatic; antiinflammatory, immunoregulatory, tissue integrity, wound healing, immune response, vaccine, caucer, asthma; allergy, cell trafficking, therapy, 28.6 KDa secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treatment, as immunoregulatory and anti-inilammatory molecule, as diagnostic for specific types of cancer and for development of an anti-cancer treatment, and as a target for antagonists in the treatment of diseases such as asthma and allergy. They are also useful to inhibit or enhance the activity of the soluble molecule that binds proteins of the invention, for tissue and neural regeneration, to promote or block cell trafficking, and as anti-inflammatory and/or vaccine adjuvant. The present sequence is 28.6 kDa protein, a secreted protein from mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated polypeptide useful to isolate corresponding interacting proteins or other compounds, to quantitatively determine levels of interacting proteins or other compounds, and as therapeutic target -

The sequence is predicted from a fuil-length cDNA clone (see AAX59356) isolated from a human adult brain (thalamus) cDNA library. The invention provides cDNA clones (see AAX59352-58)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a novel human secreted protein, termed

encoding novel secreted proteins (see AAY06404-10) of the human testis, brain and foetal kidney. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data are provided. Suggested activities include nutritional, cytokine, cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LS170 gene; in vivo imaging; lung disease; cancer; drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Colpitts TL,                         contain at least on epitope in their sequences. The present invention relates to detection of a target LS170 polynucleotide that comprises the treating a test sample with at least one LS170-specific nucleic acid that has at least 50 percent identity with any of the sequences (AAX00801-09) which are fragments derived from various clones of LS170 gene. The LS170 nucleic acid fragments represent a set of contiguous, partially overlapping sequences transcribed from lung tissue. They are used for diagnosis, staging, monitoring, in vivo imaging, prevention and treatment of lung disease. Specifically cancer, and to indicate predisposition to such disease. Particularly detection of LS170 polynucleotide, LS170 antigons, or anti-LS170 antibodies is indicative of disease. Cells transformed with an expression system comprising the LS170 nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ab can be

Lung specific genus for developing products for diagnosing, monitoring, staging, prognosticating, imaging and treating lung cancer

Example 2; Page 35-36; 37pp; English.

The present sequence is encoded by a lung specific gene, designated Lng110, clone ID 135520, gene ID 236760. The specification describes methods for diagnosing the presence of lung cancer in a patient. The method comprises measuring levels of lung specific genes in cells, tissues or bodily fluids, and comparing the level to that of a normal human control. The methods can be used for diagnosing, monitoring, staging or prognosticating lung cancer, especially metastatic lung cancer. Antibodies against proteins encoded by lung specific genes can be used for imaging or, when conjugated to a cytotoxic agent, for treating lung cancer.

```
The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation activity or may induce production of other or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined continuous immune districtions and disorders e.g. multiple sclenois systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases of inflammation. The proteins are also useful in the treatment of diseases.

Condition of lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, inclsions and ulcers; as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory processes, diseases of the peripheral nervous system, amplotrophic lateral sclerosis, and Shy-Drager syndrome, infections, anylotrophic lateral sclerosis, and Shy-Drager syndrome, anylotrophic lateral periods and entral nervous system vessel e.g. stroke, anylotrophic lateral periods of processes of the peripheral periods of strains of the peripheral periods of cardiac and central nervous system vessel e.g. stroke, anylotrophic lateral periods of periods of cardiac and central nervous system vessel e.g. stroke, anylotrophic lateral periods of periods of the peripheral per
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sepsis, inflammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     74 KQKAQEAEKLLNNVISK---ILPTNTDIFGLKISNSLILDVKAEPIDDGKGLNLSFPVTA 130
